What we mean by the true jet: the cone of R = 0.4 holds 99.43 GeV, the anti-k_T jet 99.83 GeV, the AK8 jet 105.79 GeV (page 1)

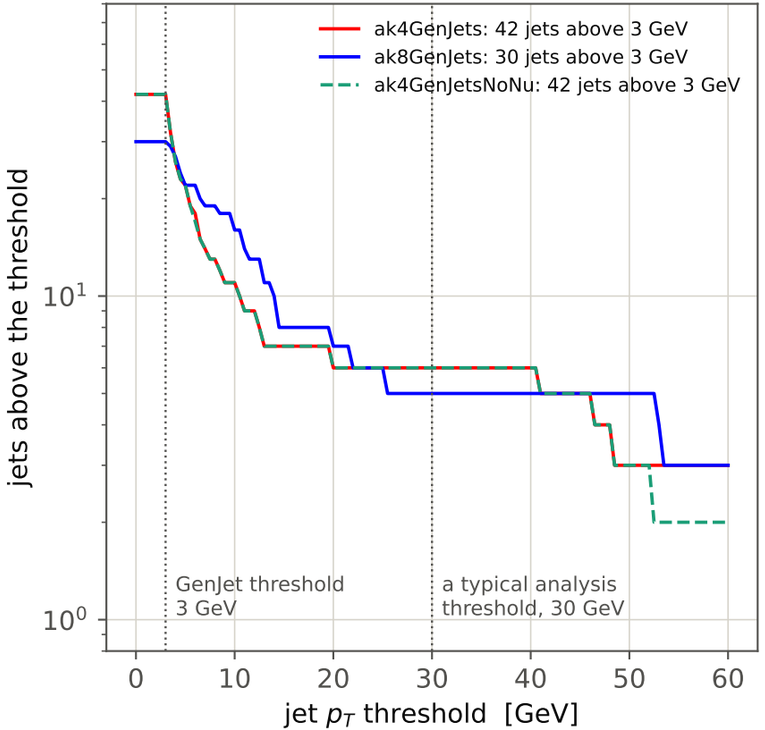

(a) the same family, a different photograph for every R

(b) anti-k_T builds our jet hard-first: 99.83 GeV, 31 particles

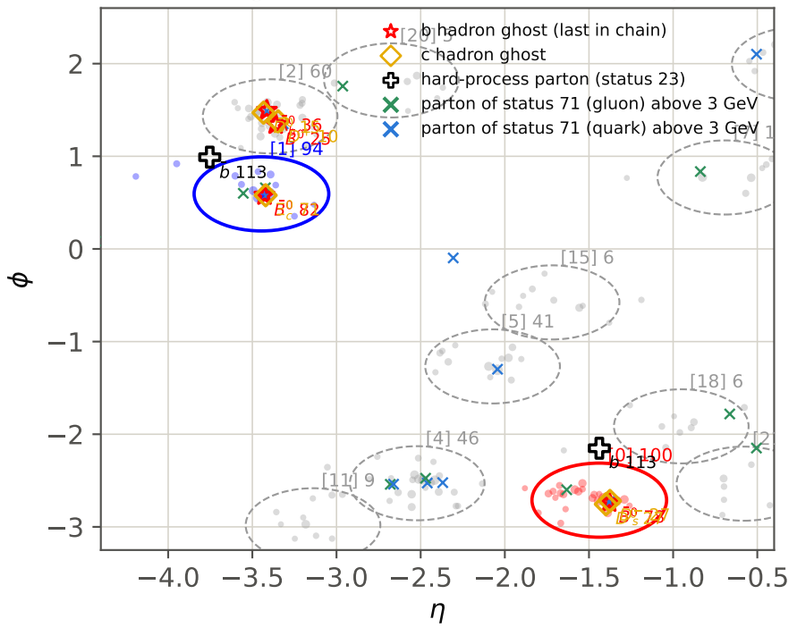

(c) the number of jets depends on the threshold

Ghost-associated hadron flavour and parton flavour: our b jet is 5 / +5, the gluon-splitting pair shares one jet (page 2)

(a) the ghosts of our event over the AK4 jets

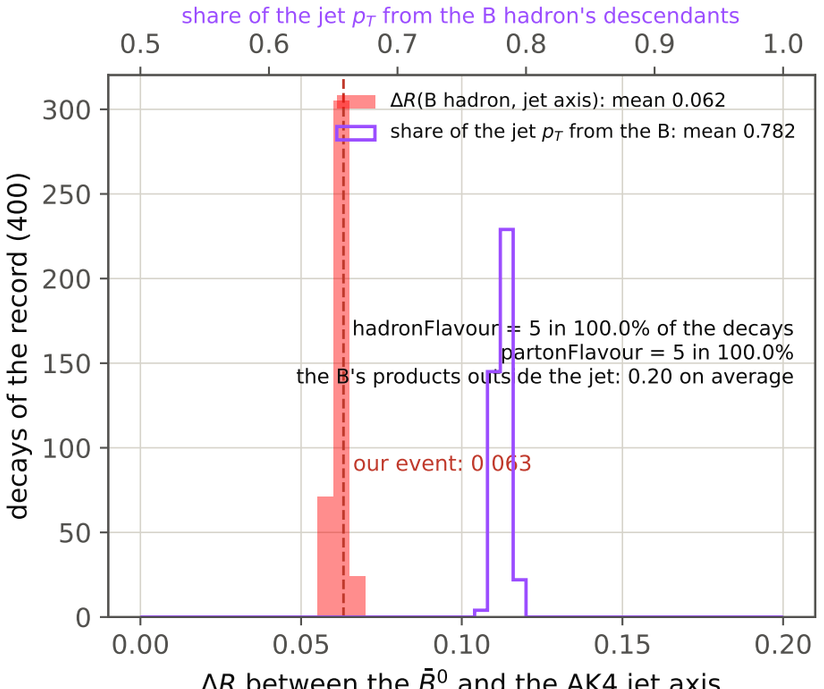

(b) one jet, six labels: the AK4 jets above 5 GeV

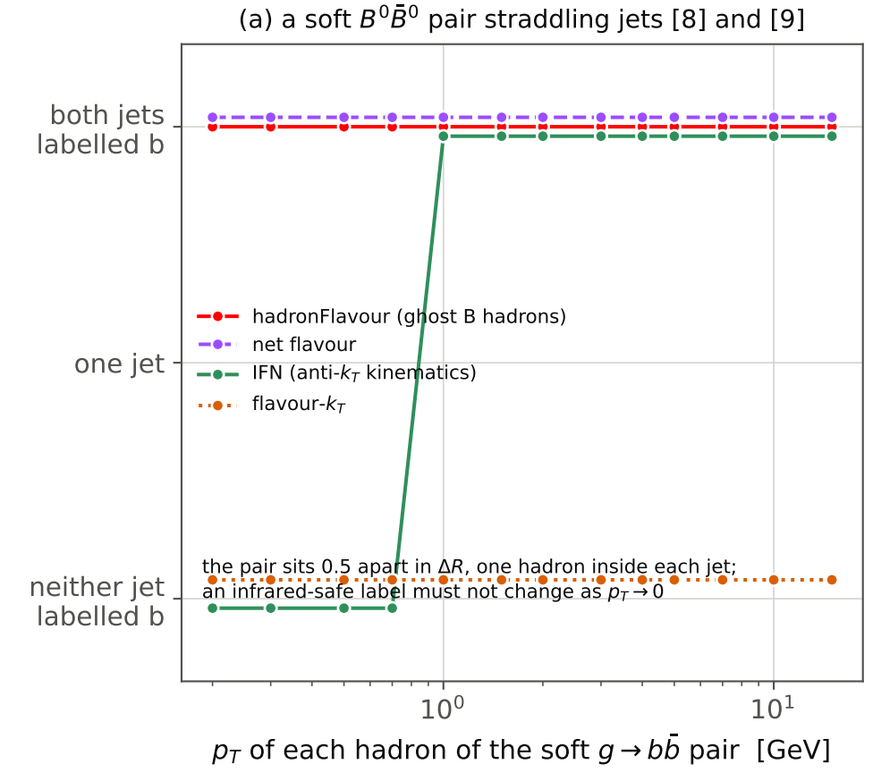

red b, blue $\bar{b}$, yellow c, green gluon, pale blue/orange light quark, grey none

[21] 5 GeV	0	21	0	21	0	0

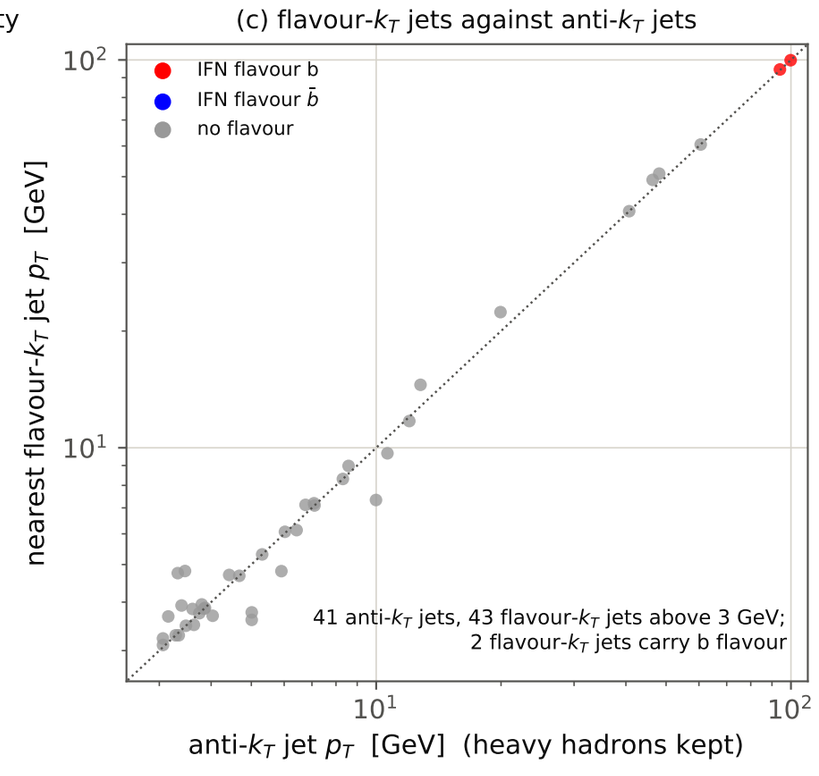

(c) the B hadron sits on the jet axis

Infrared-safe flavour: a soft pair must not relabel the photograph (page 3)

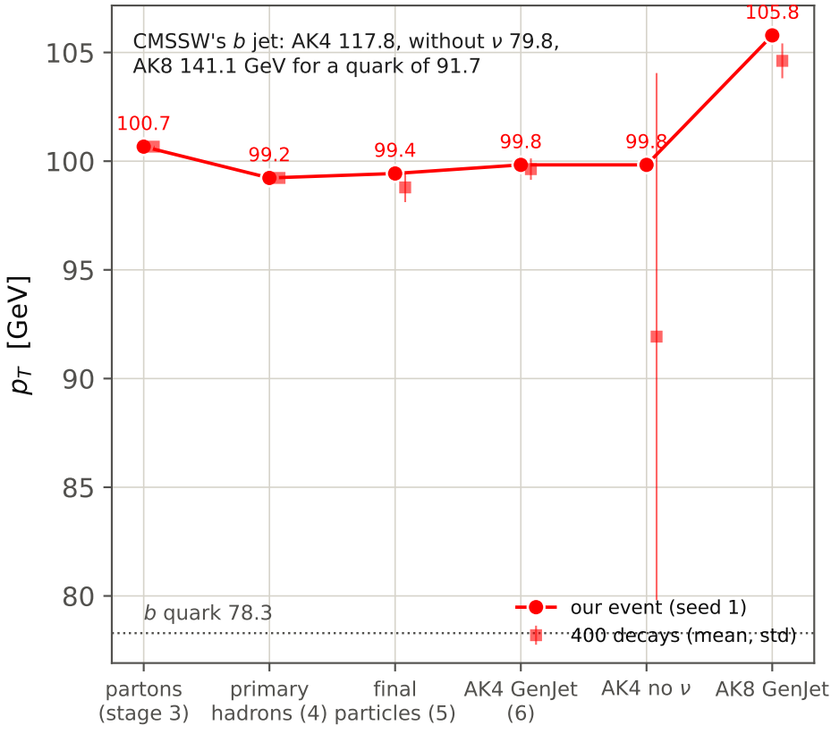

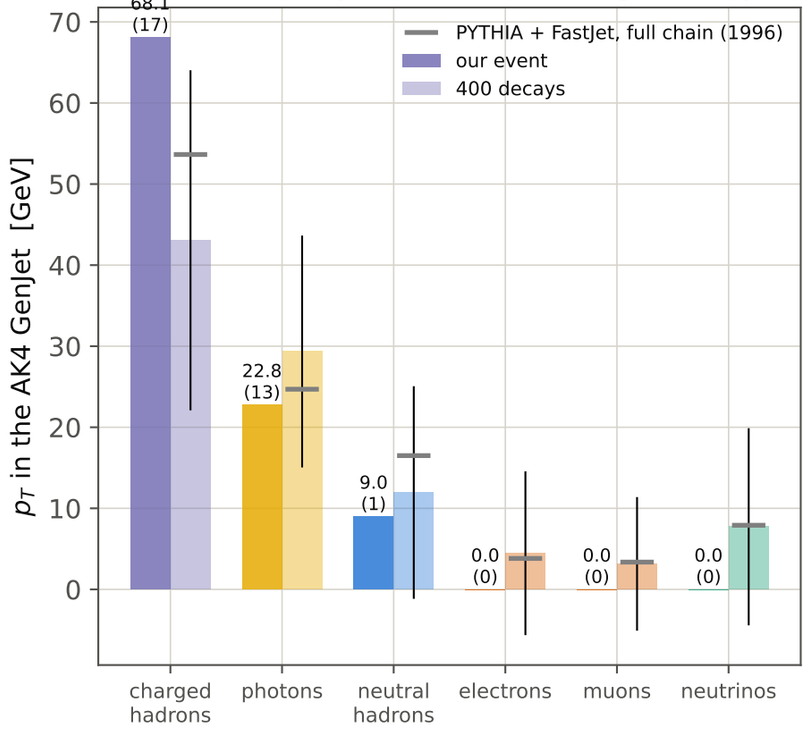

Our jet at this stage: AK4 GenJet 99.83 GeV (31 particles, hadronFlavour 5), without neutrinos 99.83, AK8 105.79 GeV (page 4)

(a) the family through the stages, and its photographs

(b) what the 99.8 GeV jet is made of (the ledger of chapter 26)

(c) the response: what the photograph shows of the quark
