

(a) matter inside the proton

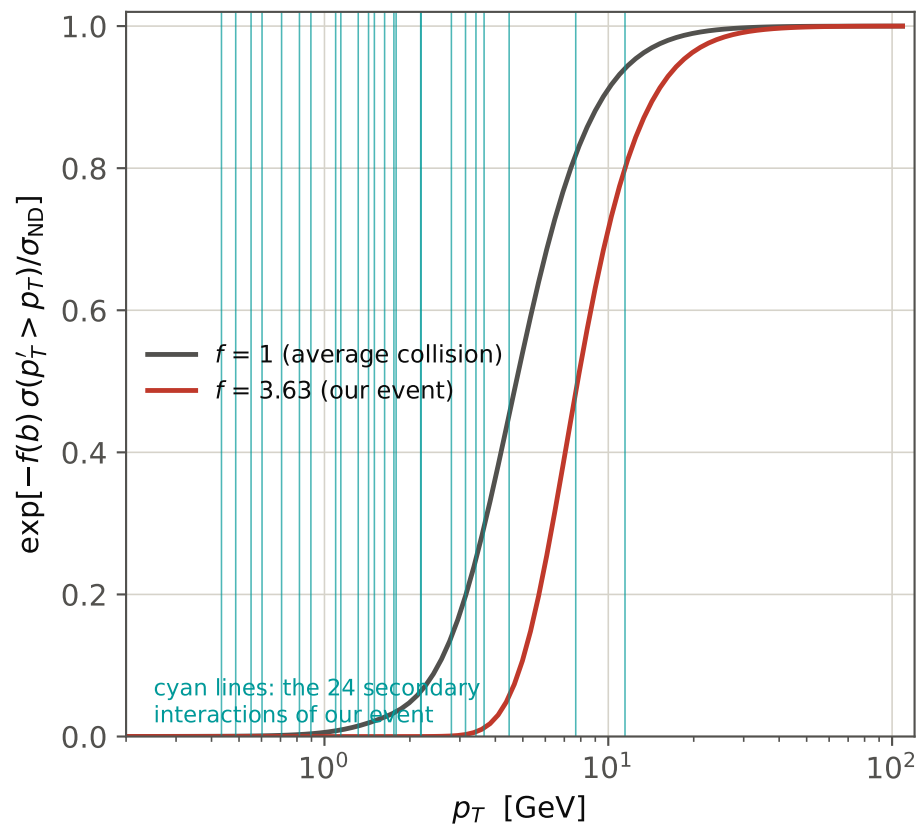

(b) overlap, interaction probability and enhancement

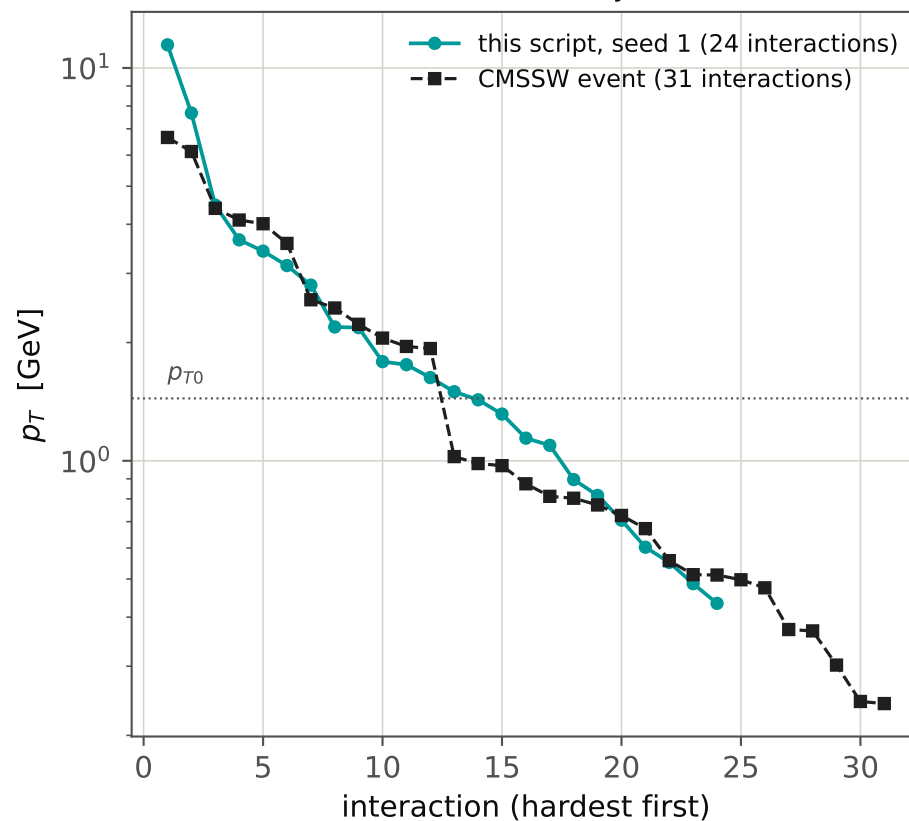

(c) which impact parameters: the hard process picks central collisions

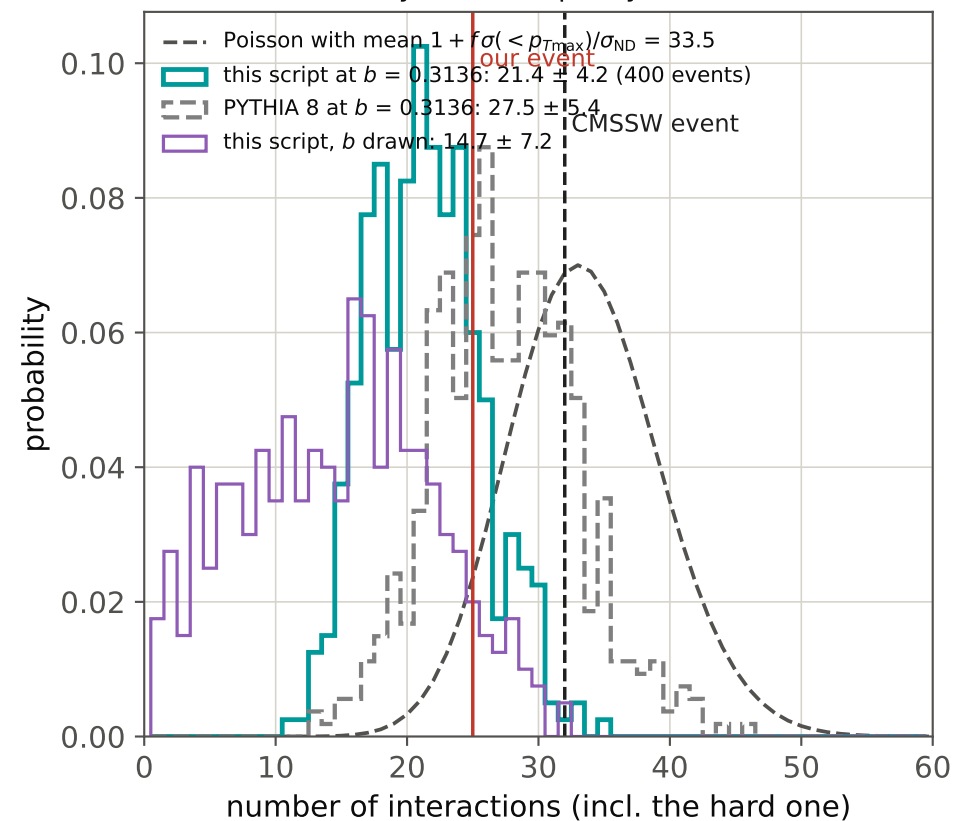

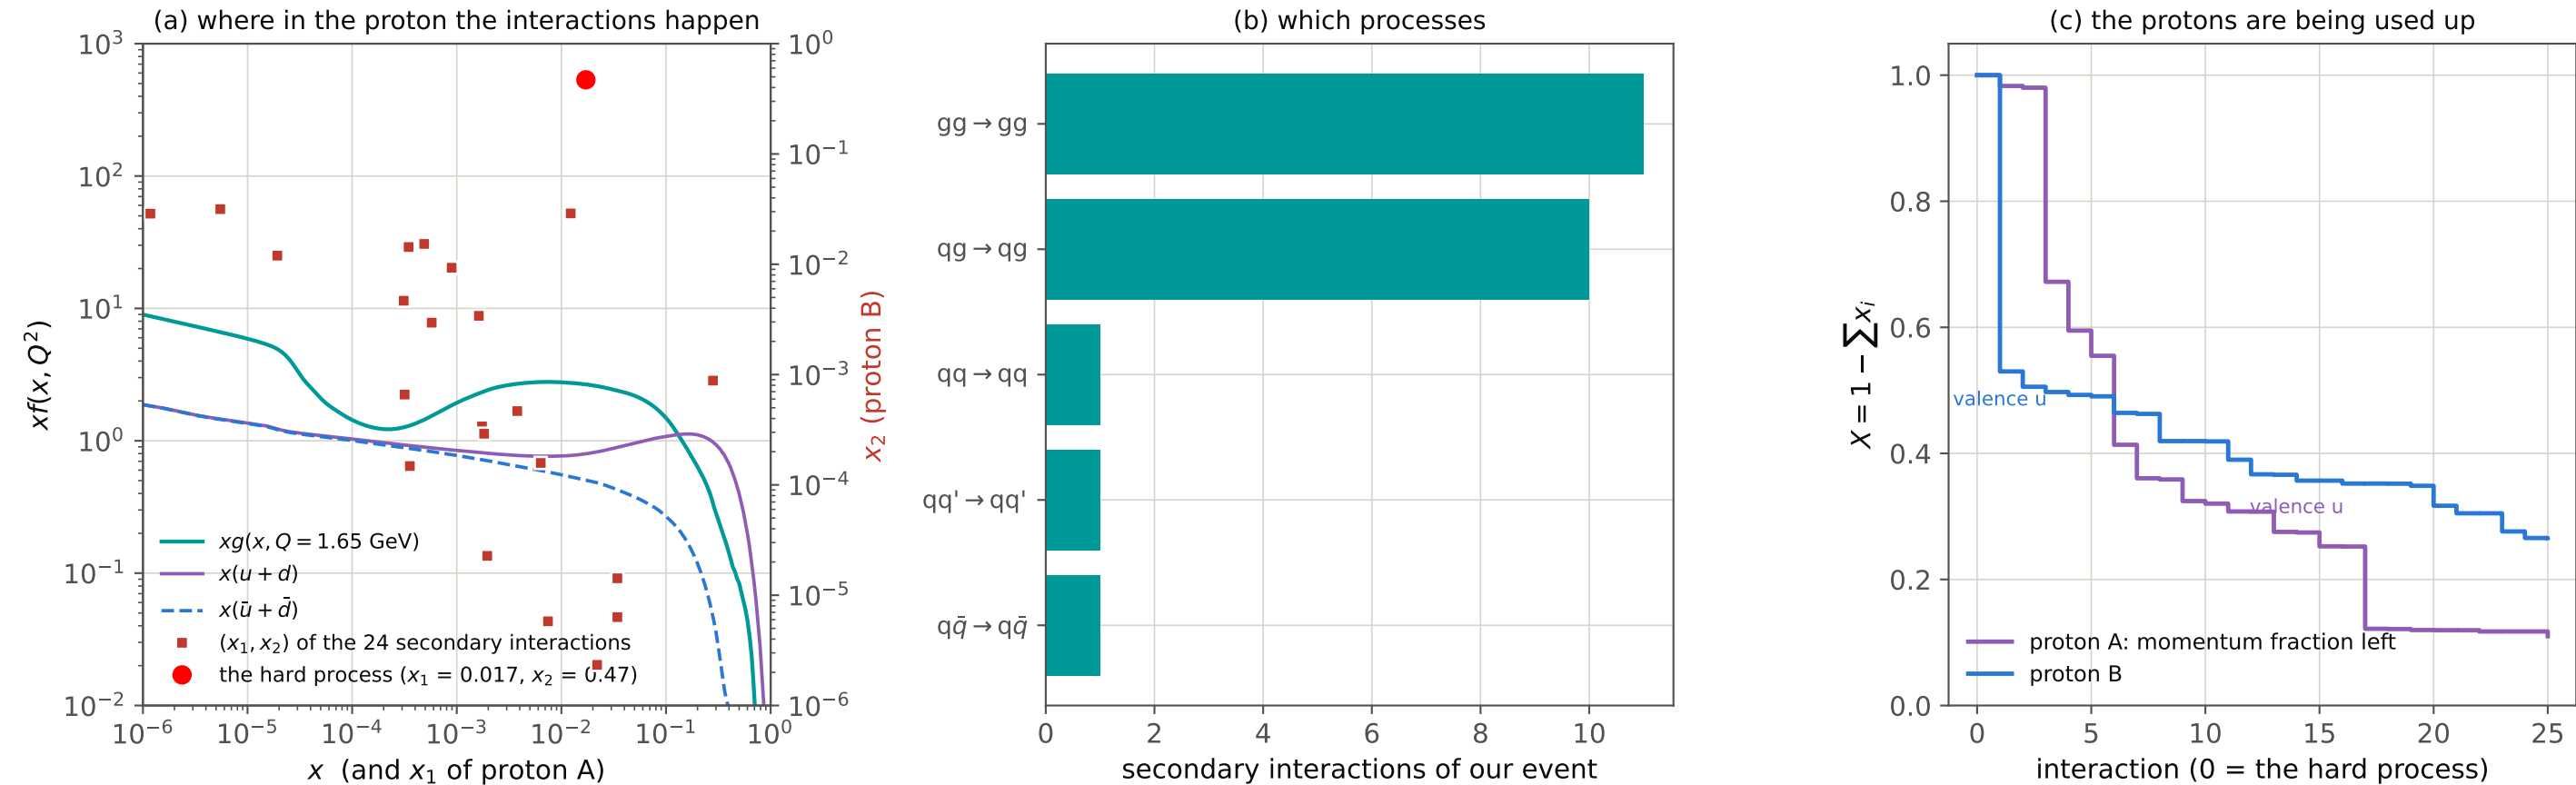

(a) no interaction between the hard scale and p_T 

(b) the ladder of secondary interactions

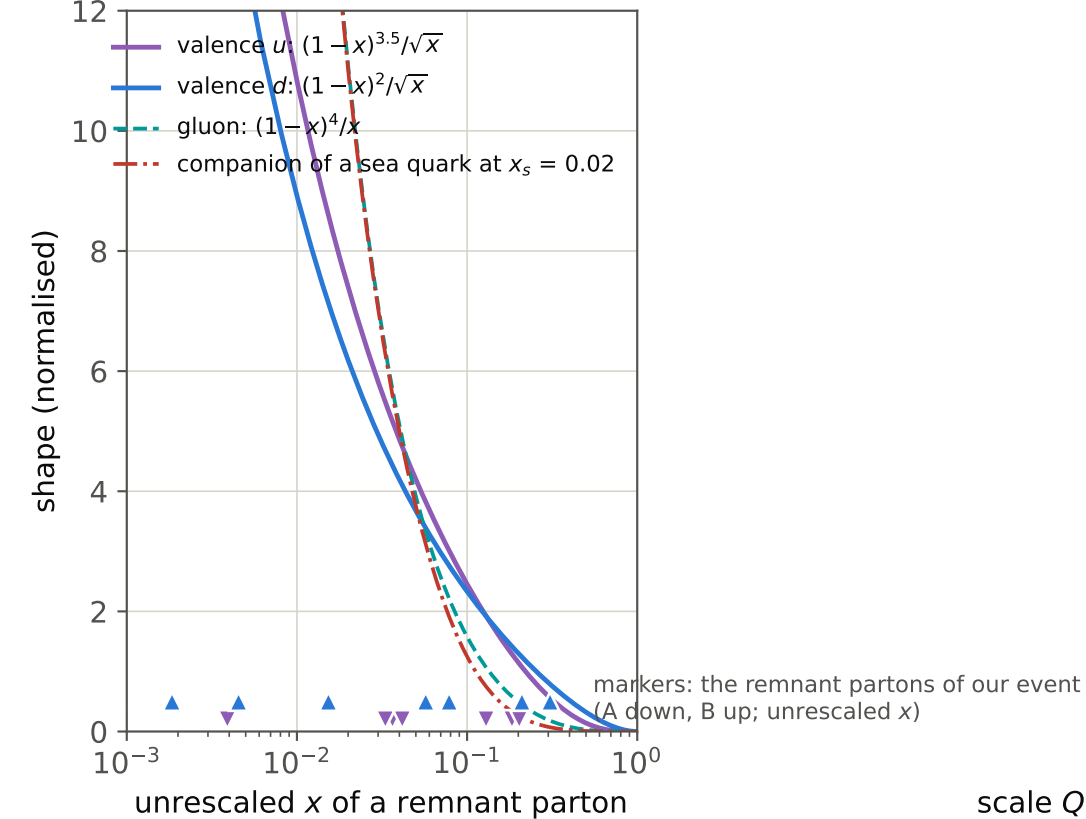

(c) how many: the multiplicity of interactions

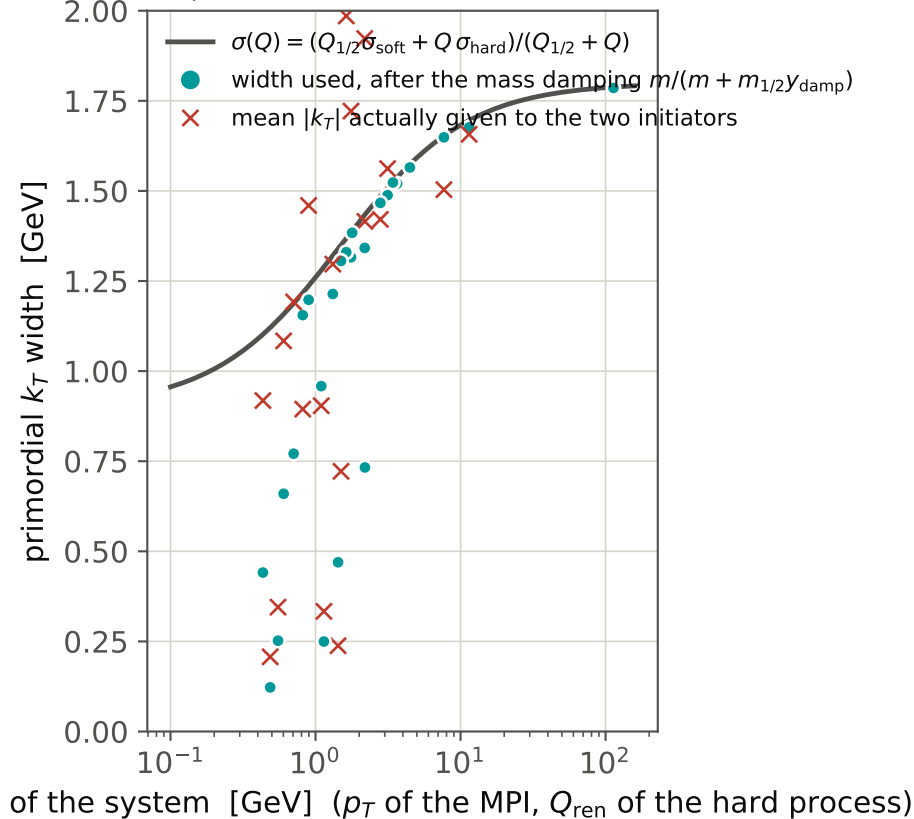

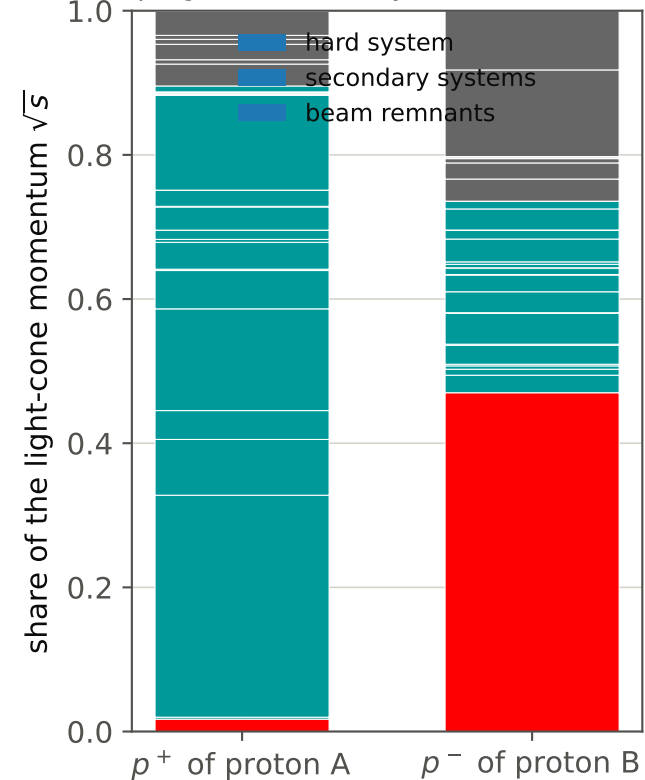

(a) how the remnants share the leftover momentum

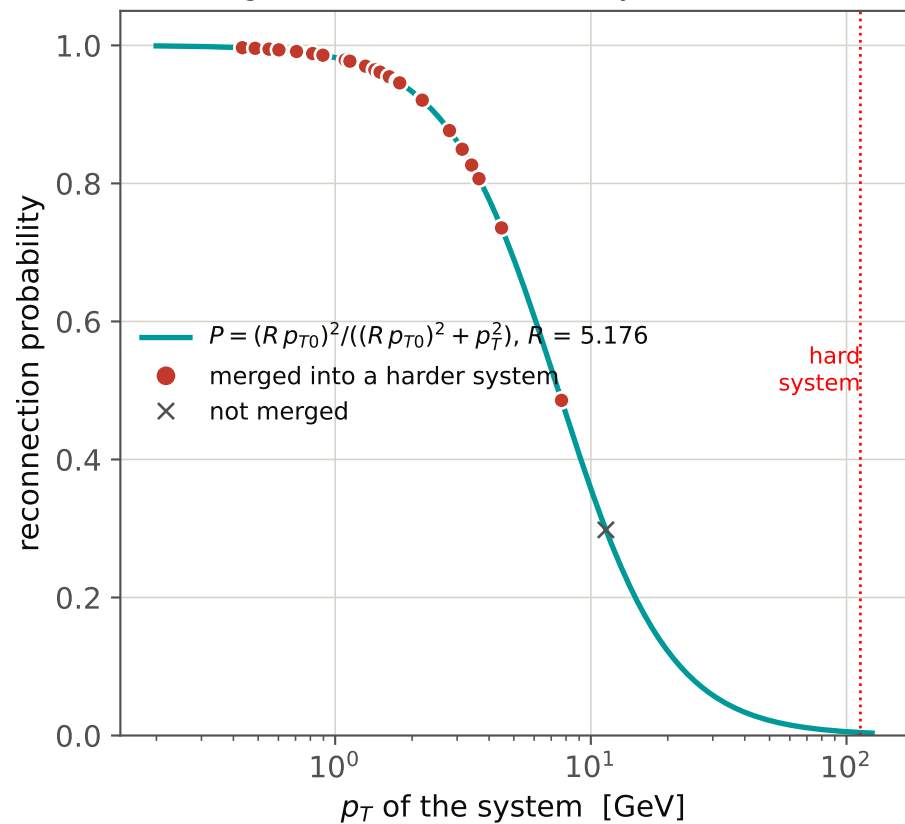

(b) primordial transverse momentum

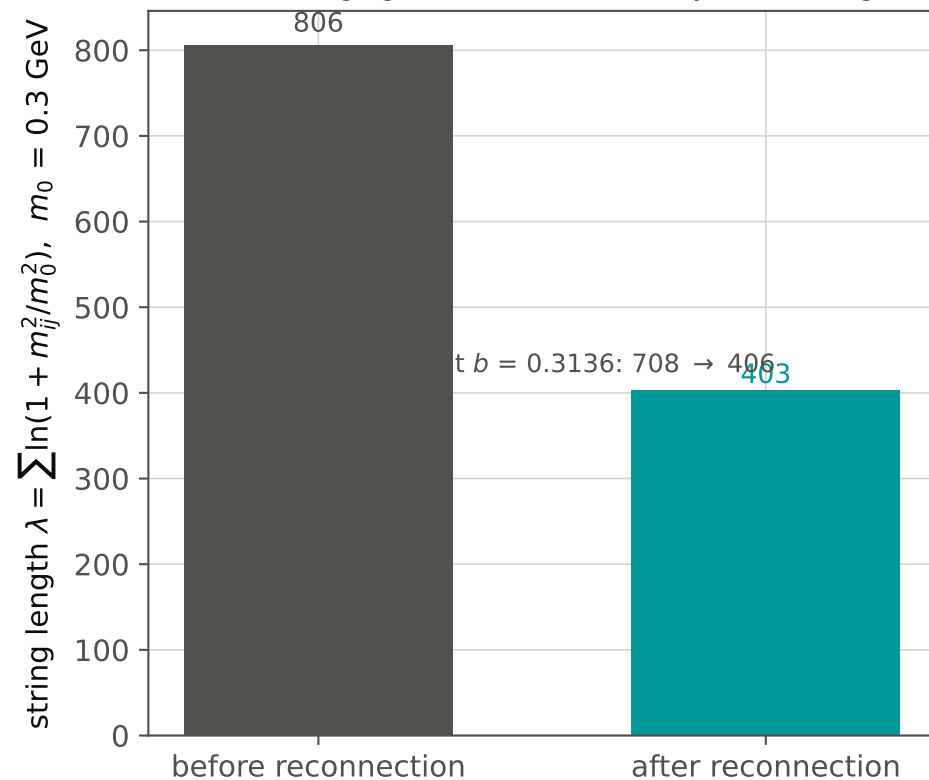

(c) the bookkeeping must close: systems + remnants

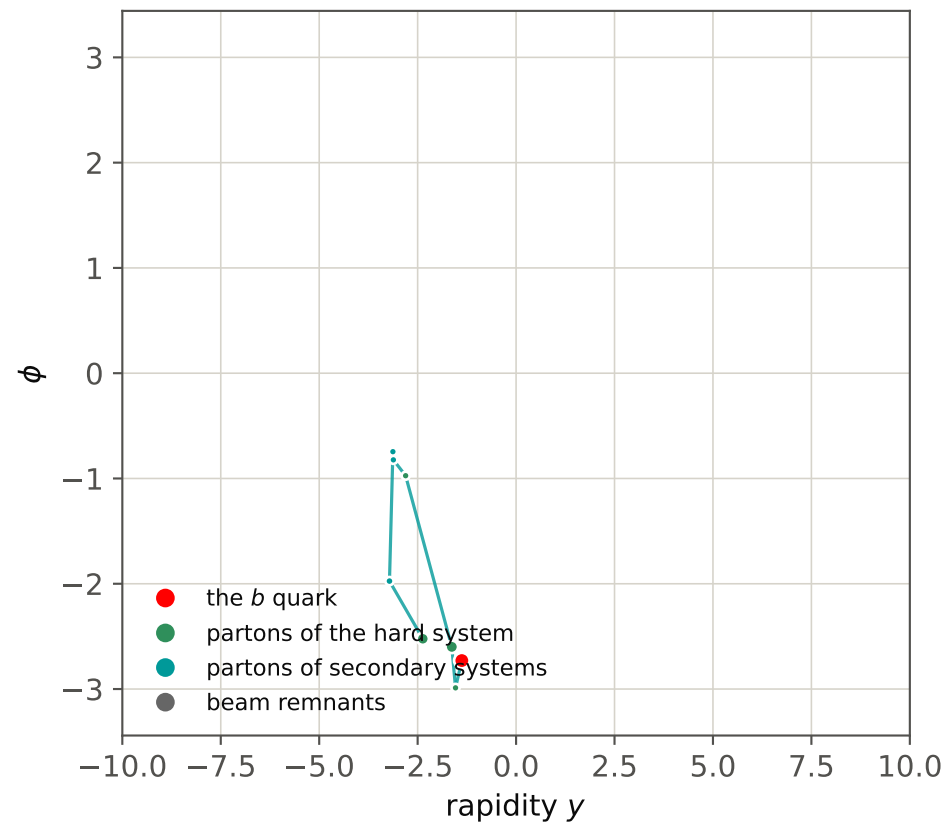

(a) who gets reconnected: the 25 systems of our event

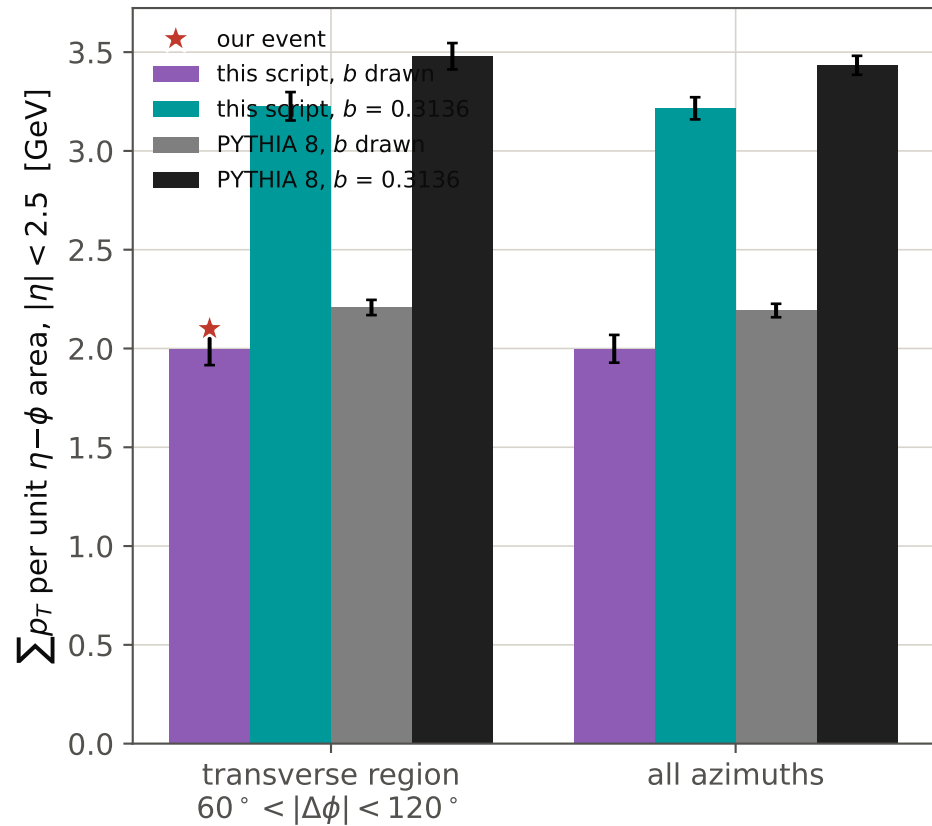

(b) the strings get shorter: 23 of 24 systems merged

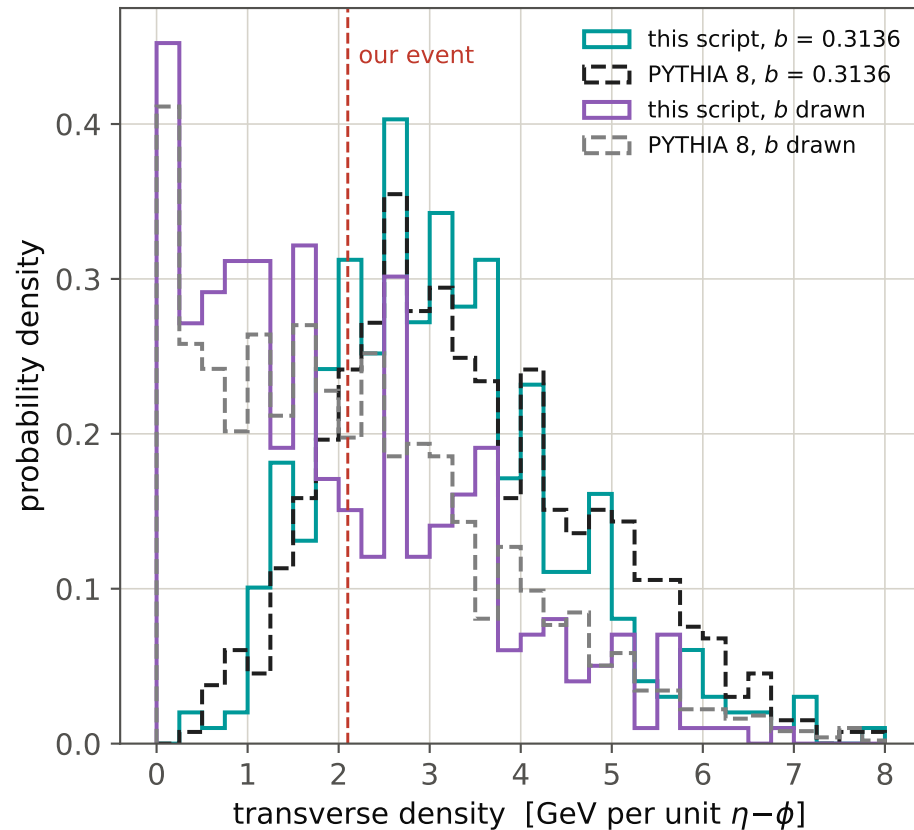

(c) the 1 string(s) that pass through the b quark, after reconnection

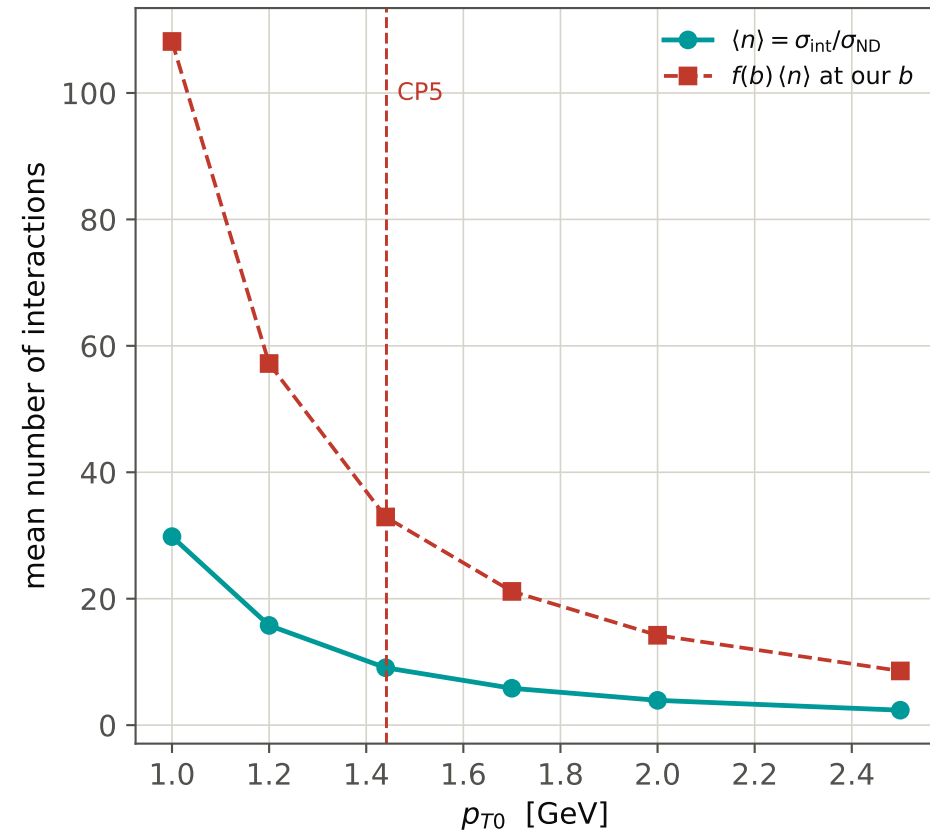

(a) underlying-event density of partons not from the hard system

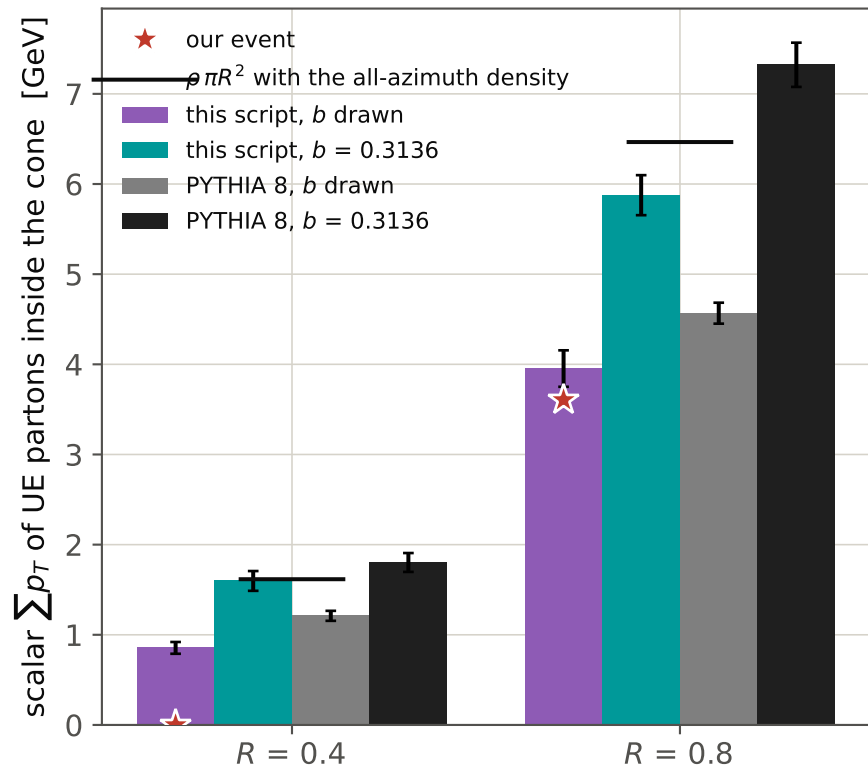

(b) event-by-event spread of the transverse density

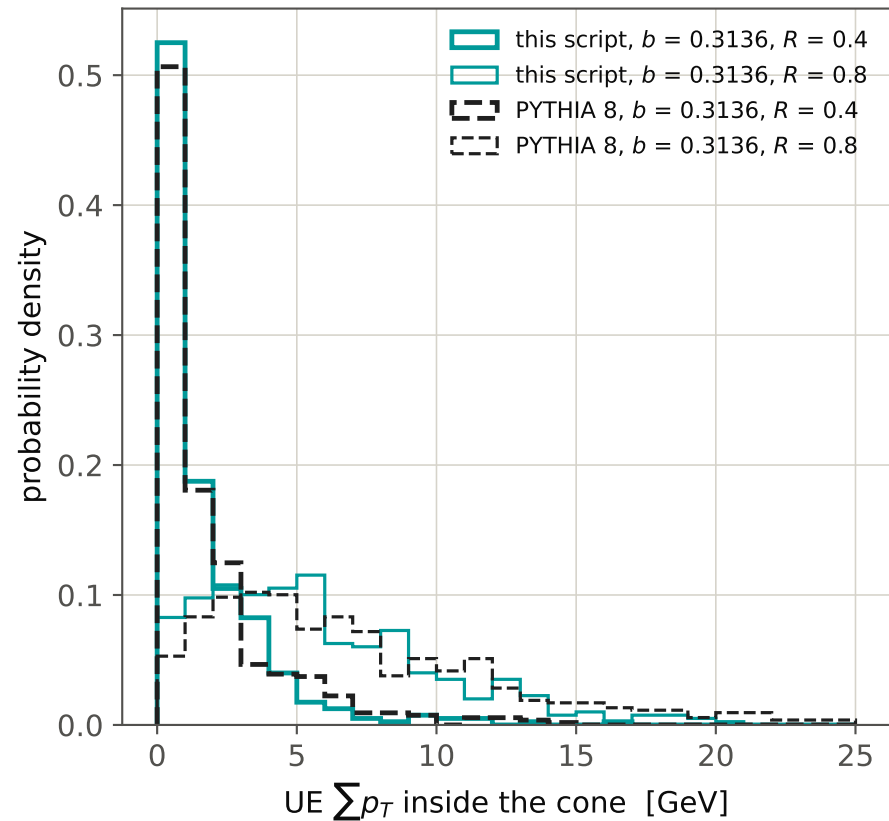

(c) the tune knob: more screening, fewer interactions

(a) what the underlying event drops into the b cone

(b) event-by-event: sometimes nothing, sometimes a lot

(c) the ledger of our event against the cone radius
